

## Practical 2

### PC to PC Communication using Cisco Packet Tracer

#### Aim:

To establish PC-to-PC communication using Cisco Packet Tracer and verify the connection by assigning IP addresses and testing message delivery.

#### Software Required:

- Cisco Packet Tracer

#### Procedure:

1. Open Cisco Packet Tracer.
2. Drag two PCs into the workspace.
3. Rename the PCs as PC0 and PC1.
4. Click on the Connections icon and select Cross-Over cable.
5. Connect PC0 to PC1 using the selected cable.
6. Assign IP address and subnet mask to both PCs.
7. Switch to Simulation mode and test the communication.
8. Verify that the message is delivered successfully.

#### IP Configuration:

PC0:

IP Address: 192.168.1.1

Subnet Mask: 255.255.255.0

PC1:

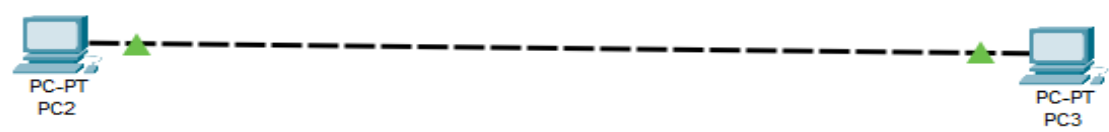

IP Address: 192.168.1.2

Subnet Mask: 255.255.255.0

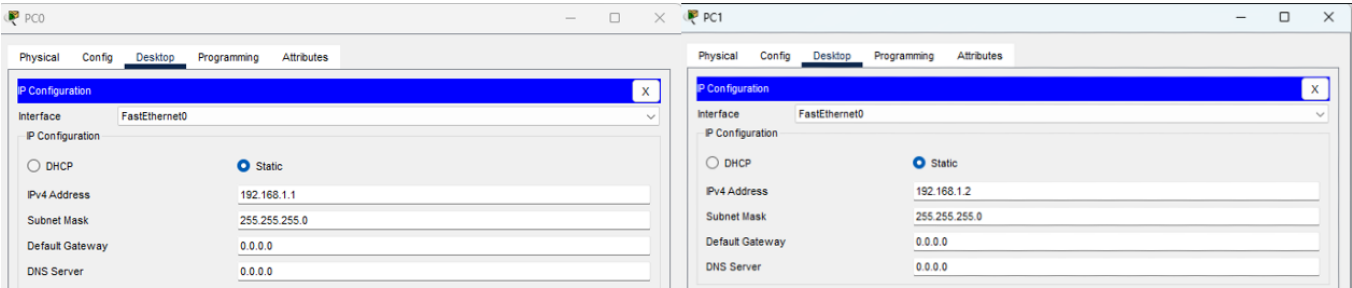

#### Result:

The subnet mask and IP addresses were configured successfully. On running the simulation, the message was delivered without any error, confirming that the PC-to-PC connection was established successfully.
